Shivani Sharma (Founder, Kleap Technologies)</li><li>7. Kushaagra Mehra (Senior Sales Engineer, Zscaler)</li></ol>
<b>Abstract/short note on the workshop/seminar</b>	Every year, Team Matrix at SCIT conducts an event to help raise awareness about cybersecurity among college students and IT professionals. Due to the current pandemic scenario from last year, we have modified the framework of the event from last year and have scheduled a full virtual event for October. As a result, all enthusiasts from all over India would

be able to join. Team Matrix has endorsed Stay Safe Online and joined hands to spread the word about information security.

**CSAM 2021 Theme: CYBERVOR - The evolving model of Rectitude**

This year's theme aims to prepare everyone for taking proactive measures to safeguard their data and recover from any attack. CYBERVOR is an abbreviation for a 'Cyberspace Survivor'. The Covid-19 Pandemic has completely changed the ways organization operate and the ways we work, play, communicate and fundamentally function. This transition has comparatively been easier for young adults and children who were born in this digital era. The escalating tensions between the countries of the globe are a major reason why we might pause and ponder on the necessity for global cyber governance.

Our theme focuses on spreading awareness on Cyber Laws and Citizen Rights, Attack on personal devices, Attack through malicious sites, Blind consent on agreements, ease over security, Flawed security practices, surfing smartly, sharing less and thinking first. The aim is to raise awareness on how individuals can get justice for being a victim of any cybercrime.

**EVENTS AT CSAM'21**

1. Capture the Flag (A jeopardy style Capture the Flag competition)
2. Panel Discussion (2 Panel Discussions on current relevant information security topics)
3. How long will you survive? (A Live Quiz, Case Discussion and Debate competition)
4. Cyber Runner (A mix of Video Case and Quiz based event on basic cybersecurity)
5. Cyber Trivia (A quiz and crossword on cybersecurity)
